

Running the sim

```
cd <repo-root>
```

Make sure the submodules in `./ros_ws/src` are loaded. See the `README.md`.

Then run to build:

```
cd ./ros2_ws/  
colcon build  
source install/setup.bash
```

Run to launch the simulation:

```
ros launch hsfd_gazebo_simulation simulation.launch.py robot_pkg_name:=volksbot_driver robot
```

Getting the message definition is possible via:

```
ros interface show .../.../...
```

Run the recorder:

```
ros run trajectory_recorder recorder
```

Control the bot:

```
ros run teleop_twist_keyboard teleop_twist_keyboard
```

Once finished moving, close the `trajectory_recorder`. Then run, in the same directory where the recorder was run:

```
gnuplot  
plot 'odometry.txt' u 1:2
```
